RECOMMENDATION

- ☐ Publish unaltered
- ☒ Publish in minor, required changes
- ☐ Publish after major required changes
- ☐ Review again after major changes
- ☐ Reject (a major rewrite is required; encourage resubmission)
- ☐ Reject (paper is seriously flawed; do not encourage resubmission.)

COMMENTS

Specific reviewer comments to be passed to the author/s. *Please expand on any weak areas in the checklist and offer specific advice as to how the author(s) may improve the paper.*

This paper investigates the low utilisation of Fall Risk Assessment (FRA) systems among elderly users and proposes the concept of Failure-Induced Dropout Syndrome (FIDS) to explain why users abandon the system after early failure. The study combines the Technology Acceptance Model (TAM), the Octalysis gamification framework, and behavioral theories such as self-efficacy and Prospect Theory to analyze user behavior, which provides a meaningful interdisciplinary perspective. The authors also implement a gamified skiing-based rehabilitation game and conduct an eight-week experiment with elderly participants to evaluate user engagement and clinical outcomes. The findings indicate that while gamification improves perceived usefulness, ease of use, and clinical outcomes, it does not fully address

the dropout problem caused by failure experiences. This observation contributes valuable insights into the design of health technologies for elderly populations.

To further strengthen the paper, the authors could provide clearer descriptions of the experimental setup and participant selection process, as well as discuss potential limitations related to the relatively small sample size. Additionally, comparing the proposed findings with other existing gamified health systems would help highlight the broader applicability of the study.

Changes:

1. The abstract is too long, 100 words to 150 words is the best appropriate, including the problem to be resolved, the method to solve the problem, results and conclusions achieved.
2. Format paper according to the conference template:
<https://www.icmss.org/Word+Latex%20Template.zip>
3. The references shown should be relevant and cited in the paper in sequence, please mention all the references in the order [1], [2], [3], [4]... in the context.
